DESCRIPTION

The M74HC4017 is an high speed CMOS DECADE COUNTER/DIVIDER fabricated with silicon gate C^2MOS technology.

The M74HC4017 is a 5-stage Johnson counter with 10 decoded outputs. Each of the decoded outputs is normally low and sequentially goes high on the low to high transition of the clock input. Each output stays high for one clock period of the 10 clock period cycle. The CARRY output goes low to high after OUTPUT 10 goes low, and can be used in conjunction with the CLOCK ENABLE (CKEN)to cascade several stages.

The CLOCK ENABLE input disables counting when in the high state. A CLEAR (CLR) input is also provided which when taken high sets all the decoded outputs low.

All inputs are equipped with protection circuits against static discharge and transient excess voltage.
